

DYNAPROOFED™

OUTBACK RUGGED CANVAS

Recommendations for Use and Maintenance

Waterproofed canvas has been used in Australia since the early days of settlement for protection from the harsh and unpredictable Australian climate. Canvas remains the traditional Australian fabric for weather protections and recreational covers due to its breathability, comparatively light weight, natural cotton appearance.

Dynaproofed Canvas is Australian for canvas. It is proudly produced in Australia to meet the most severe of weather conditions. The Outback Rugged composition provides assurance for the most demanding applications such as Road Train haulage across Nullabor, Tent and Camper Trailers on 4WD adventures, and even the old faithful canvas swag for sleeping under the stars.

The Dynaproofed Canvas range is the trusted Aussie canvas and made in a range of specialised fabrics to perform in specific situations.

Care instructions:

- New canvas should be thoroughly wet before use and allowed to dry. Repeat 2-3 times to ensure sealing up of the seams.
- Clean only with cold water and brush - do not use soap or detergent.
- Ensure product is completely dry prior to storage.
- Do not expose to petrol, oil or solvents.
- Restore well worn products with DYNAPROOF.

Note: Dynaproofed Canvas is an Industrial Textile. From time to time, it may be subject to random aesthetic imperfections. These imperfections are cosmetic only and will not impact at all on the performance of this high quality canvas.
